

Product Requirements Document

What DealFlow must do, for whom, and why.

Cherry • DealFlow • Working Document • Version 1.0 • September 2026

1. Purpose

Define the functional and non-functional requirements for DealFlow and provide a stable reference for product, design, engineering, QA and operations.

2. Product Goal

Enable real-estate businesses to organize existing and new data and reliably move opportunities from lead to closure with clear next actions.

3. Users

Agent

Broker/Owner

Sales Manager

Operations User

Builder/Developer Sales User

Channel Partner

Administrator

4. Core Requirements

Contacts and organizations

Lead lifecycle

Customer requirements

Property inventory

Property matching

Follow-ups and tasks

Timeline/activity history

Site visits

Deal workspace

Documents

Import/data onboarding

Dashboards

Notifications

Configurable workflows

Roles and permissions

Audit trail

5. Non-Functional Requirements

Security by design

Tenant isolation

High data integrity

Responsive core workflows

Observability

Backup and recovery
Backward-compatible evolution
Accessibility and usability
Controlled migrations
Reliable notifications and background jobs

6. V1 Acceptance Boundary

Lead → requirement → property → match → follow-up → next action must work end-to-end.
Existing data must be importable with preview, mapping, validation and history.
A user must be able to understand today's work from one primary attention view.

7. Out of Scope for V1

Full accounting
Loan marketplace
Construction management
Public property marketplace
Large autonomous AI agents
Dozens of third-party integrations
Customer-specific code forks

8. Requirement Governance

Every requirement has an owner, priority, rationale, acceptance criteria and release target.
Changes are reviewed for product value, technical impact, security, data impact and support impact.
