

Business Requirements Document

Business outcomes, operating model, constraints and success measures.

Cherry • DealFlow • Working Document • Version 1.0 • September 2026

1. Business Objective

Create a recurring-revenue real-estate software product that solves operational leakage around leads, follow-ups, properties, visits, documents and deals.

2. Business Outcomes

Reduce forgotten opportunities

Improve follow-up discipline

Reduce manual data organization

Increase operational visibility

Create a reusable SaaS platform for different real-estate operating models

3. Customer Segments

Individual agents

Small brokers/agencies

Property consultants

Channel partners

Builders/developers

Growing multi-branch organizations

4. Operating Model

Self-service product is the default.

Optional Cherry managed onboarding/data services may support customers with large or messy existing datasets.

Service activities should be candidates for future automation/productization.

5. Success Measures

Paid conversion

Activation through data import or first lead

Weekly active usage

Follow-up completion

Site-visit conversion

Retention

Expansion

Support effort per account

6. Business Constraints

Keep onboarding simple

Avoid excessive customization

Protect customer data

Do not promise deal/revenue outcomes

Validate pricing with real customers

7. Strategic Guardrails

Customer value before feature count

Simple UX

Strong internal architecture

Continuous improvement

Backward-compatible product evolution
