

Domain & Data Model Specification

Business entities, relationships, lifecycle and data ownership.

Cherry • DealFlow • Working Document • Version 1.0 • September 2026

1. Core Entities

Tenant/Organization

User

Role

Permission

Contact

Customer

Lead

Requirement

Property

Project

Unit (later)

Activity

Follow-up

Site Visit

Deal

Document

Payment

Commission

Workflow

Import Batch

Data Source

Audit Event

2. Lead Lifecycle

New → Contacted → Qualified → Matching → Visit → Negotiation → Won/Lost/On Hold. The exact pipeline is configurable.

3. Distinct Concepts

Process status = where the business process is.

Interest = customer's current interest level.

Outcome = what happened.

Next action = what should happen next.

4. Imported Data Model

Source file/source system

Import batch

Original value/provenance

Mapping

Validation result

Confidence/review status

Activation state

Import history

5. Data Integrity

Stable identifiers

Tenant scoping

Validation

Referential integrity

Controlled deletion/archival

Audit for sensitive changes

Explicit migrations

6. Future Compatibility

Schema changes should preserve existing data meaning wherever practical.

New fields and capabilities should coexist with earlier records.

API contracts should evolve deliberately.
