

System Architecture Document

Technical architecture and quality attributes.

Cherry • DealFlow • Working Document • Version 1.0 • September 2026

1. Architecture Goal

Provide a modular, secure and maintainable SaaS foundation that can support multiple customer operating models and continuous evolution.

2. Logical Layers

Web/mobile interface

API/application services

Domain/business rules

Persistence/data access

Background jobs

Integration layer

AI capability layer

Observability/security infrastructure

3. Architectural Principles

Modularity

Separation of concerns

Tenant isolation

Least privilege

Configuration over forks

Explicit dependencies

Versioned contracts

Observable workflows

4. Quality Attributes

Security

Reliability

Performance

Scalability

Maintainability

Testability

Operability

Backward compatibility

5. Background Processing

Imports, notifications, scheduled follow-ups, document processing and AI workloads should be isolated from request/response paths when appropriate.

6. Architecture Evolution

Record important decisions in ADRs.

Avoid premature distributed complexity.

Introduce additional infrastructure only when justified by measured needs.
