

API & Integration Standards

API conventions, compatibility and integration governance.

Cherry • DealFlow • Working Document • Version 1.0 • September 2026

1. API Principles

Predictable resources

Consistent validation/errors

Authentication and authorization on every protected endpoint

Idempotency for retryable operations

Pagination/filtering for collections

2. Versioning

Avoid breaking existing clients where possible.

Use explicit versioning/deprecation practices when contracts must change.

3. Integration Types

Inbound lead sources

Messaging

Email

Property portals where commercially/technically supported

Identity providers

Storage

Analytics

Future accounting/payment integrations

4. Webhooks/Events

Use stable event contracts for important business events such as LeadCreated, FollowUpDue, SiteVisitCompleted and DealClosed.

5. Integration Reliability

Retries

Timeouts

Idempotency

Dead-letter/error handling

Observability

Credential rotation

6. Governance

Every integration has an owner, data scope, permissions, failure behavior, support plan and deprecation strategy.
