

DevOps, Release & Operations Runbook

Build, deployment, monitoring, incident and recovery procedures.

Cherry • DealFlow • Working Document • Version 1.0 • September 2026

1. Environments

Local development

Test/CI

Staging

Production

2. CI/CD

Lint/format checks

Automated tests

Security/dependency checks

Build artifact

Deployment approval where appropriate

Post-deploy verification

3. Release Process

Change reviewed → tests pass → migration plan → deploy → health check → monitor → close release.

4. Observability

Application logs

Metrics

Traces where useful

Error tracking

Background job monitoring

Import monitoring

Business workflow metrics

5. Incident Response

Detect → classify severity → contain → investigate → restore → communicate → document root cause → create prevention work.

6. Backup & Recovery

Defined backup schedule

Restore testing

Recovery objectives

Documented recovery procedure

Periodic disaster-recovery exercises as maturity grows

7. Operational Ownership

Every production capability should have an owner and known failure/support path.
