

Financial & Unit Economics Model

Commercial assumptions, costs and economic discipline.

Cherry • DealFlow • Working Document • Version 1.0 • September 2026

1. Revenue Streams

SaaS subscription

Additional users/capacity where appropriate

Premium AI/automation/storage/integrations

Onboarding/data migration

Managed operations services

2. Cost Categories

Cloud infrastructure

Database/storage

Messaging/email

AI usage

Third-party integrations

Development

Support

Sales/marketing

Security/compliance

3. Key Unit Economics

Average revenue per account

Gross margin

Customer acquisition cost

Payback period

Monthly churn

Net revenue retention as the business matures

Support cost per account

4. Pricing Strategy

Begin with hypotheses, validate with paying customers, and revise based on value delivered and cost to serve.

Do not underprice high-touch service work by hiding it inside a low SaaS subscription.

5. Financial Controls

Separate product and service revenue/cost reporting.

Track recurring vs one-time revenue.

Review infrastructure and AI costs as usage grows.
