

Operational Runbooks & Incident Handbook

Repeatable procedures for common operational situations.

Cherry • DealFlow • Working Document • Version 1.0 • September 2026

1. Import Failure

- Stop/retry safely
- Preserve import batch
- Identify failed rows
- Report actionable errors
- Allow corrected re-import without duplicating successful records

2. Notification Failure

- Check provider status
- Inspect queue/job logs
- Retry idempotently
- Surface failure to user
- Record incident if customer-impacting

3. Permission Incident

- Contain access
- Identify scope
- Review audit logs
- Correct permission
- Assess affected tenants/data
- Document and prevent recurrence

4. Data Correction

- Identify source
- Use controlled correction
- Preserve audit trail
- Validate downstream effects
- Communicate where necessary

5. Production Incident

- Severity classification
- Incident owner
- Containment
- Technical investigation
- Customer communication
- Recovery
- Post-incident review

6. Deployment Rollback

- Confirm rollback trigger

Protect data migrations
Rollback application safely
Validate health
Reconcile state
Document cause and next steps
