

Product Documentation Governance

How the documentation set stays accurate as the product evolves.

Cherry • DealFlow • Working Document • Version 1.0 • September 2026

1. Documentation Hierarchy

Company/business strategy

Product strategy

Business requirements

Product requirements

UX specification

Architecture

Domain/data model

API/integration

Security/privacy

Testing

Operations

Roadmap

Support

Legal/compliance

ADRs

2. Source of Truth

Each topic should have one primary authoritative document. Avoid duplicate conflicting specifications.

3. Traceability

Requirement → design → implementation issue → tests → release → analytics/feedback where practical.

4. Change Control

Material product changes update the relevant documents.

Deprecated behavior is marked rather than silently erased.

Release notes communicate customer-visible changes.

5. Review Cadence

Strategic documents: periodic review.

Operational documents: review after material incidents or process changes.

Technical documents: review when architecture changes.
